-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al (5,527,649 or 5,718,992).

Sato et al disclose a substrate having coated thereon, a light-shielding layer. The layer comprises dyes, pigments, and preferably electrically-conductive fine particles including carbon black, metal oxides (tin oxide, ITO, titanium oxide), and metals (gold, platinum, palladium, silver alloys, copper, and/or nickel). The layer is coated on a transparent electrically-conductive underlayer. The dry thickness of the layer is preferable 0.3 to 5 microns. With respect to the optical density and ratio density limitations, it is the position of the examiner that given the similarity of the materials, the material of the references would inherently possess these properties. Given the teachings of the references, the instant claims 1-19 are anticipated by the references.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hirayama et al (5,837,374) is cited for its teaching of similar materials.
